

CPOINT

DMXplorer™

Pocket-Sized DMX512 Transmitter

DMXplorer will make your life easier when aligning scrollers, checking dimmers, setting up moving lights, etc. DMXplorer is a tool for every light technician who wants a reliable DMX512 source any time, anywhere. The use of a fader gives more direct control compared to increasing and decreasing a level with buttons.

A variety of transmit options are available suitable for different kinds of situations. You can also build 80 presets with 24 channels and use the fader as a dip-less crossfade or as speed control. Using the auto-jump option, you can build a self-running sequence easily. All presets are stored in non-volatile memory and can be recalled at any time.

FEATURES

- Channel +/-, level with fader
- All channels level with fader
- Step channel with fader
- Auto dim and auto step channel, speed with fader
- Auto dim one channel, speed with fader 0-255 or 0-100% level display
