ProPlex® 8-TRACH SUPER

Compact, Stand-Alone DMX Record/Playback and Backup Device

Record, playback, and backup eight dynamic DMX scenes.

Play one scene at a time or several at once. With Main and Backup DMX inputs for a single universe, ProPlex 8-Track Super comes with pre-recorded scenes and is perfect for small or medium-size touring or permanent installations.

The 8-Track Super has two DMX signal inputs: One priority which overrides the 8-Track (i.e., a DMX signal from a console), and the second (IN2) used only for programming the 8-Track. Input (IN1) also functions as a DMX Through. In the event of data loss the 8-Track can be set to playback any of the pre-recorded scenes!
